Mr Robert Hollett
Manager, Operations
FCS Flooring & Concrete Solutions Specialists Inc
1190 Fairville Blvd
Saint John N.B. E2M 5T7

I wanted to congratulate you and thank you for finding a solution to the unevenness of the floors and sound control needs at the CenterBeam Project in Saint John. The project is one of the most significant Historical restorations in Canada because it involves an entire city block of circa 1877 buildings.

This challenge of integrating numerous historical buildings with different floor elevations and their subsequent restoration demanded creativity and new solutions from all of us and our subcontractors, especially your firm when it came to leveling the floors and providing sound protection when traditional solutions could not work in this project. Your recommendation to use DARO Top was the perfect solution. The service we got from you and the expertise and confidence in the product that Bernd and Robert of Daro Top demonstrated were instrumental in convincing us to use Daro Top.

Not only did Daro Top deliver the promised solution but, as a General Contractor, we were impressed with the speed at which it can be installed. It is a product that makes it easy for a General contractor to fit into an owner's tight schedule.

The owner too has been very complimentary. More than once, Mr. John Irving has indicated to me that he was very pleased that we installed it as it has resulted in an excellent floor. The difference walking on a Daro Top floor versus the creaking wood is phenomenal.

We are very proud -and so should you -of our participation in this award winning project featured in **The Magazine of the Heritage Canada Foundation**. [You can get a link to the article at our web site]. Please also pass on our thanks to Bernd and Robert at Daro Top for delivering exactly what they promised.

Yours Truly

Dan Fox
